Growth of \$10,000

Cumulative Since Inception

IMPORTANT DISCLOSURES & RISK CONSIDERATIONS

The **Russell 1000[®] Value Index** measures the performance of the Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

The **S&P 500 Index** is comprised of 500 U.S. stocks and is an indicator of the performance of the overall U.S. stock market.

The blended **60% Russell 1000 Value/40% Bloomberg Barclay's Intermediate Government/Credit (BBIGC) Index** is included as an additional comparative index because it is representative of a balanced portfolio consisting of 60% equity and 40% fixed income securities. Equities are represented by the **Russell 1000[®] Value Index** (see definition above), and fixed income is represented by the **Bloomberg Barclays Intermediate Government/Credit (BBIGC) Index**. The **BBIGC** measures the non-securitized component of the U.S. Aggregate Index. It includes investment grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related and corporate securities. Intermediate maturity bonds include bonds with maturities of 1 to 9.999 years.

An index is not available for direct investment; therefore its performance does not reflect the expenses, fees and taxes generally paid with the active management of an actual portfolio.

Average Maturity: the average time for the return of a bond portfolio's return of principal.

Effective Duration: A measure of the sensitivity of the price of a fixed-income investment with embedded options, to a change in interest rates. Duration is expressed as a number of years.

Risk Considerations: Investments in debt instruments may decline in value as the result of declines in the credit quality of the issuer, borrower, counterparty, or other entity responsible for payment, underlying collateral, or changes in economic, political, issuer-specific, or other conditions. Certain types of debt instruments can be more sensitive to these factors and therefore more volatile. In addition, debt instruments entail interest rate risk (as interest rates rise, prices usually fall), therefore the Fund's share price may decline during rising rates. Funds that consist of debt instruments with longer durations are generally more sensitive to a rise in interest rates than those with shorter durations. Investments in below investment grade quality debt instruments can be more volatile and have greater risk of default, or already be in default, than higher-quality debt instruments. Investments in municipal instruments can be volatile and significantly affected.

The fund may not achieve its objective and/or you could lose money on your investment in the fund. Stock markets and investments in individual stocks are volatile and can decline significantly in response to market, foreign securities, small company, exchange traded fund, investment style and management risks. Small and mid cap company stocks may be more volatile than stocks of larger, more established companies. Please see the prospectus for further information on these and other risk considerations.

Investors should consider the Fund's investment objectives, risks, charges, and expenses carefully before investing. The Fund's prospectus and summary prospectus contain this and other important information, should be read carefully before investing or sending money, and may be obtained from your Investment Executive, www.investdavenport.com, or by calling (800) 846-6666.
