

The third quarter ended on a sour note as Fed chairman Jerome Powell's comments in late September made it clear that he intended to continue raising interest rates at least through the end of the year. Those comments were enough to make the likelihood of an impending recession much more likely in the minds of investors. The combination of rampant inflation, rising interest rates, slowing economic growth, and geopolitical concerns weighed on nearly all investments in Q3 as both stocks and bonds declined. The S&P 500® Index declined 4.9%, ending the quarter at new lows for the year, down 23.9%. International stocks performed worse for the quarter and are down about 27% this year, as the U.S. dollar has continued to strengthen and recession fears in Europe have escalated. Commodities typically do well in inflation periods and are one of few investments that have posted positive returns for the year. However, they have declined more than 17% since their highs in early June.

Asset Category	Q3 2022	YTD
U.S. Large Cap Stocks	-4.9	-23.9
U.S. Mid Cap Stocks	-3.4	-24.3

Market Seems Solely Focused on the Fed Response

Top line inflation numbers have remained high, but the Fed's actions have begun to impact economic growth, commodity prices, and asset values (namely stocks and real estate), which could ultimately lead to lower inflation readings. But when will the Fed relent? To say all eyes are on the Fed would be an understatement. In fact, the gamification of Fed speak seems to have reached new heights. That is, investors are fixated on when the Fed will "pivot" and back off its hawkish stance. This would presumably create a much more favorable backdrop for the economy and stocks. But, this seems likely only when inflation is clearly much more subdued, with the Fed's target being 2% for the consumer price index (down from over 8% in recent months). In policymakers' eyes, the potential long-term harm from persistent inflation clearly outweighs the risk of a potential slowdown brought on by their efforts.

Returns Have Been Choppy Making Market Timing More Difficult

It is not unusual to see periodic, strong bear market rallies like we have this year. In 2022, we have had five 10% or more market moves, including an 11% rally in Q1 and a 17.4% rally that ended in Q3. The chart to the right shows magnitude of the market moves over the past nine months. The volatility makes attempts to try to time the market all the more difficult. For instance, had you fled the market after the 20.8% market decline between March and June and then were lured back in after the 17.4% over the next two months, you would be down 36% this year rather than the -23.9% posted by the S&P 500. We will likely continue to experience these abrupt moves as the market moves toward an ultimate bottom.

Source: Morningstar Direct

Bad Years Often Lead to Brighter Times

On the bright side, the chart at right shows that, historically, calendar years with market declines of more than 10% have typically been followed by strong 1 and 3 year returns. Since 1935, there have been only 9 years in which the S&P 500 has declined more than 10%. Seven of those nine years were followed by positive calendar year returns that ranged from +20.2% to +43.2%. Looking out three years, all nine periods posted positive returns in the 3 years following a return of -10% or more. Even the periods in the 1970's (see 1973 and 1974 in chart to the right), which many people are comparing to today, notched positive returns within three years of difficult calendar years.

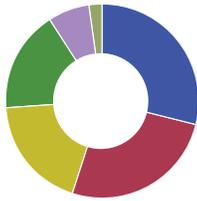

S&P 500® Index 1 and 3 Year Returns After 10%+ Yearly Decline					
Worst Years		Next Year		3 Years	
Year	Return	Year	Return	Period	Return
2008	-37.0%	2009	26.5%	2009-2011	48.6%
1937	-34.7%	1938	30.8%	1938-1940	17.5%
1974	-26.5%	1975	37.2%	1975-1977	57.6%
2002	-22.1%	2003	28.7%	2003-2005	49.7%
1973	-14.7%	1974	-26.5%	1974-1976	25.1%
2001	-11.9%	2002	-22.1%	2002-2004	11.2%
1941	-11.6%	1942	20.2%	1942-1944	80.4%

Portfolio Positioning

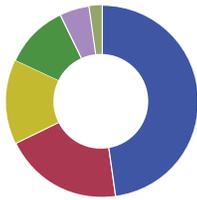

At the end of the third quarter, we replaced the FMI Large Cap Fund with the JPMorgan US Value Fund. We had been patient with FMI through what has been a growth lead market over the past five years, which we realized did not fit their style of investing. However, as we entered a more value oriented, high quality market (where we would expect them to shine), we were disappointed with their performance. We think that JPMorgan will provide us with a more consistent performance pattern going forward. The FundAdvisor models currently have the lowest exposure to international markets and highest exposure to small and mid-cap stocks since the program began. Although we realize that international markets have significantly underperformed of late and may be due for some sort of mean reversion, geopolitical uncertainty and fragile economies in both Europe and Asia make us more comfortable owning less. Small and mid-cap stocks have consistently trailed large cap stocks over the past 5 years and are trading at historically low valuations levels relative to larger cap peers. We expect them to have better relative returns once we get past the current market malaise. On the bond side, we continue to stay relatively short term and mainly high quality given the attractive yields and likelihood for rates to continue to rise for at least a few more months.

Mutual Fund and Index returns are provided by Morningstar and Zephyr StyleADVISOR.

You should consider each mutual fund's investment objectives, risks, charges and expenses carefully before investing. Each mutual fund's prospectus contains this and other important information, should be read carefully before investing or sending money, and can be obtained by contacting your Investment Executive, or by calling (800) 846-6666. The investment return and principal value of an investment will fluctuate. An investor's shares, when redeemed, may be worth more or less than their original cost. Investing in securities carries risk including the possible loss of principal.

Important Disclosures:

In June 2020, the names of the FundAdvisor composites were made due to a rebranding of the program. Maximum Growth composite was changed to Aggressive Growth, the Conservative Growth to Moderate Growth, Balanced to Growth & Income and the Conservative Balanced to Conservative Income.

² Hartford Administrative Services Company ("HASCO"), the Fund's transfer agent, has contractually agreed to waive its transfer agency fee and/or reimburse transfer agency-related expenses to the extent necessary to limit the transfer agency fee for Class Y as follows: 0.06%. This contractual arrangement will remain in effect until February 28, 2023 unless the Board of Directors of The Hartford Mutual Funds, Inc. approves its earlier termination.³ The Fund's investment adviser, Fuller & Thaler Asset Management, Inc. ("Fuller & Thaler" or the "Adviser") has contractually agreed to waive its management fee and/or reimburse Fund expenses so that total annual operating expenses do not exceed 1.30%, 1.80%, 1.25%, 0.99%, and 0.90% for A Shares, C Shares, Investor Shares, Institutional Shares and R6 Shares, respectively, of the Fund's average daily net assets through January 31, 2023.⁴ Massachusetts Financial Services Company has agreed in writing to bear the fund's expenses, excluding management fees, distribution and service fees, interest, taxes, extraordinary expenses, brokerage and transaction costs, investment-related expenses, and fees and expenses associated with investments in investment companies and other similar investment vehicles, such that "Other Expenses" do not exceed 0.10% of the class' average daily net assets annually for each of Class A, Class B, Class C, Class I, Class R1, Class R2, Class R3, and Class R4 shares, and 0.00% of the class' average daily net assets annually for Class R6 shares. This written agreement will continue until modified by the fund's Board of Trustees, but such agreement will continue until at least September 30, 2022. ⁵ Investors pay the net expense ratio of the fund.

Diversification and Asset Allocation does not ensure a profit or guarantee protection against a loss. It is important to note that short-term and trailing performance will fluctuate. We expect all of the funds at some point to experience underperformance versus their benchmarks and peer groups. However, we believe that our research process has helped us identify funds that are likely to perform well over the long term. Our decision to remove a fund is not based on short-term performance, but on in-depth analysis using our Monitoring Criteria. The mutual fund categories are determined by Davenport using a combination of Morningstar categories and a returns-based style analysis provided by Zephyr StyleADVISOR.

The **Bloomberg Barclays Intermediate Government/Credit Index** is an unmanaged index composed of debt securities with maturities from one to ten years issued or guaranteed by the U.S. Treasury, U.S. Government agencies, quasi-federal corporations and fixed rate dollar denominated SEC-registered corporate debt that are rated investment grade or higher by Moody's Investors Service and Standard and Poor's Corporation or Fitch Investor's Service, in that order. It includes investment grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related and corporate securities. The **BBgBarc US Govt/Credit 1-3 Yr** measures the performance of US Treasury securities that have a maturity ranging from 1-3 years. The **Bloomberg Barclays U.S. Aggregate Bond Index** is a broad-based benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and non-agency). The **Bloomberg Barclays U.S. Corporate Bond Index** measures the investment grade, U.S. dollar-denominated, fixed-rate, taxable corporate bond market. The **Bloomberg Barclays U.S. Government Index** includes U.S. dollar-denominated, fixed-rate, nominal U.S. Treasuries and U.S. agency debentures (securities issued by U.S. government owned or government sponsored entities, and debt explicitly guaranteed by the U.S. Government.

An index is not available for direct investment; therefore its performance does not reflect the expenses, fees and taxes generally paid with the active management of an actual portfolio.

Risk Considerations: International funds invest primarily in equity securities of issuers outside the United States. International investments are subject to additional risks such as currency fluctuations, political instability, and the potential for illiquid markets. Funds that invest in foreign securities may involve greater risks, including political and economic uncertainties, as well as risk of currency fluctuations. Investments in emerging markets come with much greater risk due to political instability, domestic infrastructure problems, currency volatility and limited equity opportunities, as many large companies may still be "state-run" or private. Small and mid cap company stocks may be more volatile than stocks of larger, more established companies. Investments in bonds and other fixed income securities may fall in value if interest rates change. Generally, the prices of debt securities rise when interest rates fall, while their prices fall when interest rates rise. Longer term debt securities are usually more sensitive to interest rate changes. An issuer suffering an adverse change in its financial condition could see the credit quality of its securities deteriorate, leading to greater price volatility of the security. Funds investing in lower quality debt securities are more susceptible to these problems and their value may be more volatile.

Gross Expense Ratio is the total annual operating expenses of a fund divided by its average net assets. **Net Expense Ratio** is the total annual operating expenses of a fund, less any fee waivers, divided by its average net assets. This is the expense ratio actually charged by the fund for the previous fiscal year. The **mean reversion**, or reversion to the mean, is a theory used in finance that suggests that asset price volatility and historical returns eventually will revert to the long-run mean or average level of the entire dataset.
