

You may recall that our fourth quarter letter included a graphic that showed that over the past 80 years, we have only experienced a market decline of more than 10% in nine calendar years. It further showed that seven of those nine years were followed by a calendar year gain of more than 20%. Like today, many of those gains were marred with significant economic, geopolitical, and market uncertainty. After the first quarter gain of 7.5% for the S&P 500® Index, it appears that record could hold up with a strong year on the heels of last year's 18.1% decline.

The market had to “climb a wall of worry” in the first quarter as investors were convinced that interest rates weren't going much higher and therefore gravitated towards the large cap growth stocks that were hit hardest in 2022, namely Apple, Amazon, Meta Platforms, Tesla, and NVIDIA. They outperformed value stocks by about 13%! Smaller cap stock gains were more modest as the collapse of Silicon Valley Bank and Signature Bank dragged down returns of most of the smaller regional banks. Strength in international markets continued with developed markets gaining 8.5% and emerging markets up 4% for the quarter. This has been driven primarily by a weakening of the U.S. dollar versus other currencies. The bond market gained 3% as interest rates declined from their recent highs. Real estate stocks continued to trail the market as higher interest rates not only hurt the appeal of their dividends compared to bonds, but also increase the borrowing costs for real estate investments. Commodities took a breather in the quarter after being one of the best performing areas of 2022. All in all, it was a very good quarter for most investments.

While we've had a solid start to the year, recession risks have clearly risen as a result of the banking debacle and most economists now believe there's greater than a 50% chance that economic growth turns negative before year end. The question remains to what extent a recession has already been priced into stocks. In fact, the S&P 500 is now up 15.6% since the beginning of October 2022, which correlates closely with last year's market bottom when investors first began feeling more confident that inflation was coming under control and the economy was remaining resilient. While a recession is never good news, the positive side of this change in expectations is that the Federal Reserve now seems more attuned to heightened economic risks and may start to slowly back away from restrictive policy if inflation continues to subside. At a minimum, it already appears the pace of interest rate hikes is peaking and some have begun predicting interest rate cuts within the next 12 months. Rate cuts can bring volatility, but barring a severe recession, “looser” policy and lower interest rates should be a positive for asset classes such as stocks over the longer term.

The outlook from here is murky at best, but we note that the stock market's overall valuation level seems fair (i.e. not overly cheap or expensive) and we expect returns over the next few years to be more moderate than what we've seen in the turbo-charged “cheap money” era. We also think investing in high quality, profitable companies will likely provide better returns than some of the lower quality, high growth businesses that have led the market since 2019. Today, we are working on a few changes to the portfolios that will likely include some reductions in the risk profiles in light of the strong returns over the past six months and the ongoing uncertainty in the market. We look forward to reporting those to you in the coming months. The next couple of pages provide a look at how our portfolios are currently allocated and which funds are being utilized.

The investment and principal value of an investment will fluctuate. An investor's shares, when redeemed, may be worth more or less than their original cost. Mutual Fund and Index returns are provided by Morningstar and Zephyr StyleADVISOR.

You should consider each mutual fund's investment objectives, risks, charges and expenses carefully before investing. Each mutual fund's prospectus contains this and other important information, should be read carefully before investing or sending money, and can be obtained by contacting your Investment Executive, or by calling (800) 846-6666. The investment return and principal value of an investment will fluctuate. An investor's shares, when redeemed, may be worth more or less than their original cost. Investing in securities carries risk including the possible loss of principal.

Important Disclosures:

²Hartford Administrative Services Company ("HASCO"), the Fund's transfer agent, has contractually agreed to waive its transfer agency fee and/or reimburse transfer agency-related expenses to the extent necessary to limit the transfer agency fee for Class A as follows: 0.13%. This contractual arrangement will remain in effect until February 29, 2024 unless the Board of Directors of The Hartford Mutual Funds, Inc. approves its earlier termination.³ The Fund's investment adviser, Fuller & Thaler Asset Management, Inc. ("Fuller & Thaler" or the "Adviser") has contractually agreed to waive its management fee and/or reimburse Fund expenses so that total annual operating expenses do not exceed 1.30%, 1.80%, 1.25%, 0.99%, and 0.90% for A Shares, C Shares, Investor Shares, Institutional Shares and R6 Shares, respectively, of the Fund's average daily net assets through January 31, 2023.⁴ Massachusetts Financial Services Company has agreed in writing to bear the fund's expenses, excluding management fees, distribution and service fees, interest, taxes, extraordinary expenses, brokerage and transaction costs, investment-related expenses, and fees and expenses associated with investments in investment companies and other similar investment vehicles, such that "Other Expenses" do not exceed 0.10% of the class' average daily net assets annually for each of Class A shares. This written agreement will continue until modified by the fund's Board of Trustees, but such agreement will continue until at least September 30, 2023.⁵ Investors pay the net expense ratio of the fund.

Diversification and Asset Allocation does not ensure a profit or guarantee protection against a loss. It is important to note that short-term and trailing performance will fluctuate. We expect all of the funds at some point to experience underperformance versus their benchmarks and peer groups. However, we believe that our research process has helped us identify funds that are likely to perform well over the long term. Our decision to remove a fund is not based on short-term performance, but on in-depth analysis using our Monitoring Criteria. The mutual fund categories are determined by Davenport using a combination of Morningstar categories and a returns-based style analysis provided by Zephyr StyleADVISOR.

Any opinions expressed here are statements of judgment on this date and are subject to future change without notice. This information may contain forward looking predictions that are subject to certain risks and uncertainties which could cause actual results to differ materially from those currently anticipated or projected. The information contained herein has been compiled from sources believed to be reliable; however, there is no guarantee of its accuracy or completeness. There is no guarantee that a company will continue to pay a dividend. The investment return and principal value of an investment will fluctuate. Small and mid cap company stocks may be more volatile than stocks of larger, more established companies. The portfolios may invest in foreign securities which are subject to additional risks such as currency fluctuations, political instability, differing financial standards and the potential for illiquid markets.

Bonds are subject to market and interest risk; values expect to decline as interest rates rise. Bonds may not be suitable for all investors and you should consider specific risks such as credit risk, default risk and volatility prior to investing.

The **MSCI Europe, Australia and Far East (MSCI EAFE) Index** is an unmanaged index composed of the stocks of approximately 1,000 companies from around the world, excluding the U.S., Canada, and Latin America. The **MSCI ACWI ex USA SMID Index** represents the performance of small-cap and mid-cap stocks in developed and emerging markets, excluding the U.S. The index is computed using the net return, which withholds applicable taxes for non-resident investors. The **MSCI Emerging Markets (MSCI EM) Index** is a capitalization-weighted index of stocks from emerging markets that only includes issues that may be traded by foreign investors. The reported returns reflect equities priced in U.S. dollars and do not include the effects of reinvested dividends. The **Russell 2500® Index** is a market cap-weighted index that includes the smallest 2,500 companies covered in the Russell 3000 universe of United States-based listed equities. The **Bloomberg U.S. Corporate High Yield Index** measures the U.S. dollar-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. The **Bloomberg Intermediate Government/Credit Index** is an unmanaged index composed of debt securities with maturities from one to ten years issued or guaranteed by the U.S. Treasury, U.S. Government agencies, quasi-federal corporations and fixed rate dollar denominated SEC-registered corporate debt that are rated investment grade or higher by Moody's Investors Service and Standard and Poor's Corporation or Fitch Investor's Service, in that order. It includes investment grade, U.S. dollar-denominated, fixed-rate Treasuries, government-related and corporate securities. The **Bloomberg US Govt/Credit 1-3 Yr** measures the performance of US Treasury securities that have a maturity ranging from 1-3 years. The **Bloomberg U.S. Aggregate Bond Index** is a broad-based benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and non-agency). The **Bloomberg U.S. Corporate Bond Index** measures the investment grade, U.S. dollar-denominated, fixed-rate, taxable corporate bond market. The **Bloomberg U.S. Government Index** includes U.S. dollar-denominated, fixed-rate, nominal U.S. Treasuries and U.S. agency debentures (securities issued by U.S. government owned or government sponsored entities, and debt explicitly guaranteed by the U.S. Government).

An index is not available for direct investment; therefore its performance does not reflect the expenses, fees and taxes generally paid with the active management of an actual portfolio.

Risk Considerations: International funds invest primarily in equity securities of issuers outside the United States. International investments are subject to additional risks such as currency fluctuations, political instability, and the potential for illiquid markets. Funds that invest in foreign securities may involve greater risks, including political and economic uncertainties, as well as risk of currency fluctuations. Investments in emerging markets come with much greater risk due to political instability, domestic infrastructure problems, currency volatility and limited equity opportunities, as many large companies may still be "state-run" or private. Small and mid cap company stocks may be more volatile than stocks of larger, more established companies. Investments in bonds and other fixed income securities may fall in value if interest rates change. Generally, the prices of debt securities rise when interest rates fall, while their prices fall when interest rates rise. Longer term debt securities are usually more sensitive to interest rate changes. An issuer suffering an adverse change in its financial condition could see the credit quality of its securities deteriorate, leading to greater price volatility of the security. Funds investing in lower quality debt securities are more susceptible to these problems and their value may be more volatile.

Gross Expense Ratio is the total annual operating expenses of a fund divided by its average net assets. **Net Expense Ratio** is the total annual operating expenses of a fund, less any fee waivers, divided by its average net assets. This is the expense ratio actually charged by the fund for the previous fiscal year. The **mean reversion**, or reversion to the mean, is a theory used in finance that suggests that asset price volatility and historical returns eventually will revert to the long-run mean or average level of the entire dataset.
